

Lesson 4.1: Module 4 Introduction

EXPLOITING AND SECURING VULNERABILITIES IN JAVA APPS

Module 4 Introduction

Joubin Jabbari
Software Security Architect
UC Davis

UC DAVIS
Continuing and Professional Education

Slide 1: Welcome Back!

Welcome Back!

A look at vulnerable components

Fast-paced culture requires building on other's code

Carries insecurities and vulnerabilities

Example: Equifax

Slide 2: This Module is a Little Different

This Module is a Little Different

Two screencast demonstrations

Review and learn from work and insights of others from preceding modules

Focus on wrapping up what you've learned

Slide 3: Learning Objectives

Learning Objectives

Explain why vulnerable components are vital to security of our applications

Find the flaw or vulnerable components in code

Identify a process that works against this flaw and patch it

Describe the anatomy of an attack

Complete your final peer review project
